

LENOVO SWITCH CENTER

Lenovo® Switch Center provides remote monitoring and management of Ethernet and converged switches from Lenovo. It is designed to simplify and centralize the management of your BladeCenter®, Flex System™ and RackSwitch™ Ethernet and converged switches.

BENEFITS

As data centers continue to scale they are producing increasing numbers of physical and virtual devices. Switch Center can help to alleviate the management issues resulting from this increase of devices. Switch Center offers:

- **Simplified management:** Point-and-click administration of large groups of switches and Flex System Interconnect Fabric points of delivery (PODs). Updates that took hours or days can be done in minutes.
- **Automation:** Automated and scheduled software downloads, configuration updates and backups. Provision a full Flex System Interconnect Fabric POD automatically to simplify management and reduce human error.
- **Integration:** Integrated with industry-leading enterprise management systems (IBM Systems Director), and virtualization management applications to improve security and help reduce training costs.
- **Monitoring and reporting:** Monitor the health of the network fabric. Get comprehensive reporting on switches in your network and your Flex System Interconnect Fabric PODs.
- **Configuration and back-up management:** Configure multiple switches with CLI scripts to reduce deployment time. Backup and manage configurations for all switches from a single platform to reduce switch management complexity.
