DMVC App

Dallmeier Mobile Video Center App for Android or iOS Operating System

Download on the App Store

ANDROID APP ON Google play
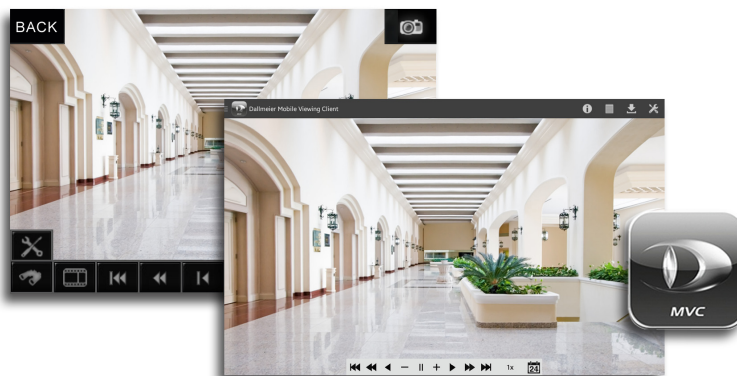

The **Dallmeier Mobile Video Center** App enables the mobile access to Dallmeier systems (DVR, NVR, server, cameras) using a smartphone with Android or iOS operating system. You can conveniently access the live video as well as the corresponding recordings on the go. Special transcoding prepares the video for ideal display on the smartphone and ensures a high frame rate at the same time.

The Dallmeier App has an intuitive operation including multi-touch zoom and allows individual settings for 3G and Wifi operation. Particularly interesting is the 3G download counter with adjustable limit that offers continuous cost control.

For an optimal overview all cameras are shown in a list with preview images. The video resolution is freely selectable: QCIF, CIF, 2CIF, 4CIF or HD[1]. A recording and snap shot function is available both in live and playback mode. For a quick and convenient access a personal favourites list can be created. The request of system messages is possible as well.

The **Dallmeier Mobile Video Center** App is available **for free** in the iTunes App Store or on Google Play.

Features
- Live and track access
- Camera list with preview images
- Intuitive operation
- Multi-touch zoom
- Individual settings for 3G and Wifi operation
- Recording and snap shot function in live and playback mode
- 3G download counter with adjustable limit for cost control
- Personal favourites list
- Request of system messages
- Free updates
